

**Bulletin Number:** TB-240901

**Subject:** P51W Heater Switch Wiring

**Issue Date:** Feb. 10, 2025

**Scope:** PH51W-EA7, PH51W-EB7 Heater Kits

**Complaint:**

New style wiring harness has different colour wires that don't match switch wires. Previous versions of manuals did not reflect the current wiring.

**Resolution:**

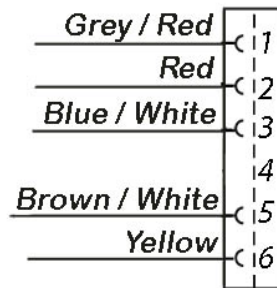

To improve the quality, the main wiring harness for the P51W heaters are now made in Canada. To facilitate production, some wire colours needed to be changed. For this reason, they no longer line up colour to colour when connecting the switch. Below are the proper wiring connections required. Manuals have now been updated to reflect this change.

**Switch Wiring Instructions:**

*Route harness to switch location.*

*Connect switch wires to match as shown*

*Heater Harness Side*

*Switch Side*
